PROFESSIONAL SUMMARY

Fourth-year BSIT student at the Technological Institute of the Philippines and game, web, and app developer with 6+ years of game-development experience focused on Roblox and Lua. Project experience spans interactive games, web/mobile apps, AI-assisted hazard detection, and Firebase-backed reservations. Skilled in analyzing code, diagnosing and fixing bugs, and organizing project structures across software projects, with additional experience in Cisco networking and cybersecurity fundamentals.

TECHNICAL SKILLS

Languages: Lua, Python, Java, C++, C, JavaScript, PHP, HTML, CSS, Swift, Pebble, Windows batch scripting
Game development: Roblox scripting, combat systems, enemy AI, classes, trading systems, roguelike and progression design
Web and app development: React, JavaScript, Vite, PHP, Firebase Authentication / Firestore, IIS, Android
Systems and development analysis: Code review, bug diagnosis and fixes, project structure and folder organization, system analysis
Networking and cybersecurity: Cisco network configuration/troubleshooting, Kali Linux, Nmap, Wireshark, authorized network/web/app inspection, public-source research (OSINT), social-engineering awareness
AI and application security: Ultralytics YOLO, TensorFlow Lite, PPE classification, authentication, MFA, data encryption
Tools and collaboration: Git, GitHub, VS Code, debugging, documentation, feature planning, team coordination

SELECTED SOFTWARE DEVELOPMENT PROJECTS

HAZORA | Web Dashboard | React, Vite, Firebase, Python, FastAPI, Computer Vision
- Supported ongoing dashboard feature development, backend fixes, and database improvements, including hazard-classification and incident-storage workflows.
- Contributed security enhancements for authentication, MFA, and data encryption; trained Ultralytics YOLO models for web/mobile use and coordinated team tasks, documentation, and milestones.

HAZORA Mobile | Java, Android, CameraX, TensorFlow Lite, YOLOv8, SSD MobileNet
- Contributed from early development through ongoing feature work, focusing on hazard/PPE classification and integrating trained Ultralytics YOLO models into the Android app.
- Supported app debugging, testing, documentation, and team coordination alongside mobile feature development.

Harborlight Hotel Reservation Website | HTML, CSS, JavaScript, Firebase Authentication, Firestore, IIS
- Built guest room search and reservation requests, employee room/reservation management, and administrator staff approval and role management.
- Used Firebase Authentication and Firestore for staff accounts and application data; deployed the site to IIS on a Windows Server VM.

EnScryptor | PC Security Toolkit | Batch, PHP, HTML, CSS, JavaScript
- Early web-development project pairing a PHP-based site with Windows batch utilities for PC maintenance and anomaly checks.
- Prototyped defensive utilities for anti-keylogging, blocking remote access, and malware cleanup; treated as a learning prototype, not a validated antivirus product.

Pebble: Game of Nim | Python, Pebble
- Developed a small event-driven programming language and interpreter, then used it to implement Nim game logic with AI and playable GUI and web interfaces.

The Last Run | Roguelike Campaign | React, JavaScript
- Built a playable roguelike featuring class-based combat, enemy AI, status effects, equipment and loot, pets, bosses, subclass unlocks, persistent runs, and permadeath.

Interactive Developer Portfolio | React, Vite, JavaScript, CSS
- Created a portfolio with playable game demos and interactive showcases for class design and roguelike progression.

EDUCATION

Bachelor of Science in Information Technology | Technological Institute of the Philippines
Fourth-year student
